# Plan Considerations

## Plan Lengths

**Customers can have flexibility by choosing the length of their contract:**

1. Month-to-Month
2. 12 Month
3. 24 Month

## Internet Speeds

**GigaComm offers a range of speed packages**

1. 100/25Mbps
2. 200/50Mbps
3. 1000/50Mbps

## Router

### 1. BYO Router

Customers can choose to bring their own modem as long as it is compatible with their network. Routers supplied by other internet service providers may have settings that are not compatible. Technical support is not provided for BYO routers.

### 2. GigaComm

To enjoy the full benefits of our Residential Internet Service, it is recommended to purchase GigaComm's high-grade Gigabit capable router for \$125 (inc. GST)

# Plan Considerations

## How it works?

### 1. Fibre to the Distribution Point

Fibre is run through the building up the building risers to several distribution points that convert the signal from fibre to copper to deliver services using the latest generation of broadband over copper technology called G.Fast.

### 2. G.Fast

By appropriate placement of the G.Fast equipment we are able to reliably provide a 1Gbps broadband signal over copper to an existing wall plate in each apartment.

### 3. Connect with GigaComm

You can then connect either your own router or a router purchased through GigaComm. \* Depending on the configuration of your building we might need to install fixed wireless equipment on the rooftop.
